FOAMS & FABRICS

Foams & Fabrics

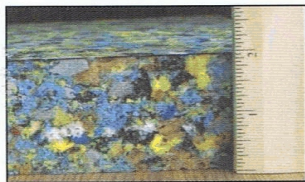

URETHANE FOAMS

We stock this "soft" foam from 2" up to 12" thickness in 1lb. and 2 lb. densities, and 30 ILD up to 100 ILD (see Foam Dictionary). Urethane foam is used for beginning gymnasts and light tumbling, and in thicker versions in landing mats.

POLY FOAMS

Closed-cell, cross-link poly foam offers firm, lightweight, shock-absorption for the top recoil. Often used for high-impact activities like advanced gymnastics and martial arts. Our 2" thickness is excellent for heavier participants who tend to bottom-out.

BONDED FOAM

Our 6lb. density bonded foam provides durability and safety for medium impact gymnastics, exercise and wall padding. Good for semi-firm landings and stability, yet not as firm as our poly foams.

LAYERED LAMINATED FOAMS

Urethane foam laminated to poly foam provides a firm landing surface with a soft cushion underneath to prevent bottoming out. We offer our layered foams in several thickness and layer combinations.

Foam Dictionary

DENSITY – Lbs. per cubic foot. 1.7 lb. density foam means 1 cubic foot of its weighs 1.7 lbs.

ILD – INDENTION LOAD DEFLECTION is a measurement of foam firmness and is independent of foam density. ILD is measured by indenting (compressing) a foam sample to 25% of its original height. The amount of force in lbs. required is its ILD measurement. The more force required, the firmer the foam. Open-cell foam ILDs usually range from 10 ILD (super soft) to 100 ILD (very firm).

CROSS-LINK – A polyethylene foam with a smooth finish

OPEN CELL – A foam you can breathe through (like our urethane foams)

CLOSED CELL – A foam you cannot breathe through (like our poly foams)

Super tear-resistant PVC-coated shells with high UV, flame resistance and anti-bacterial formulations.

Our PVC coated fabrics can take the most rugged indoor and outdoor wear. All indoor mats and wall paddings meet all fire codes - including NFPA 701, CA Fire Marshall, and UL.

Color Selections

Actual colors may vary.
